

Casewise Signs OEM Agreement with CA Technologies to Help Businesses Ease Decision-Making

Combined CA ERwin Data Modeling and Casewise Enterprise Architecture Solution Helps Visualize Data in Context

SAN DIEGO, April 29, 2013 – ENTERPRISE DATA WORLD - Casewise Systems, a leading international provider of Enterprise Business Architecture, Business Process Analysis and Business Process Management software and solutions, today announced it has signed an OEM agreement with CA Technologies to provide a data-driven enterprise architecture solution that helps businesses visualize organizational interdependencies for better decision-making.

Casewise Integrated Modeler, powered by CA ERwin[®], gives organizations the ability to clearly see data in context, with linkages to core enterprise processes, technologies and applications.

“Companies with vast amounts of data scattered throughout their enterprise have a difficult time interpreting and leveraging that data to make it meaningful,” said Jeff Fraleigh, Senior Vice President, Casewise. “We are excited to work with CA Technologies to help organizations make sense of their data assets and to get a truly holistic view of their enterprise.”

The bundled solution makes enterprise models even more actionable – specifically with the ability to create physical database designs from higher-level strategic models.

Through model visualization and reporting, customers can identify where and how data elements are being used throughout the organization. Users can also analyze existing operations and assess the impact of potential changes before actually implementing them.

By capturing and enabling a better understanding of the relationships between people, processes, technologies, strategy and data, Casewise Integrated Modeler, powered by CA ERwin, eases the business decision-making process.

“IT is under pressure from the business to deliver new applications faster than ever, despite ever-increasing organizational complexity that makes it nearly impossible to truly understand how different pieces of the organization connect,” said Donna Burbank, Vice President, CA Technologies. “We are excited that Casewise has chosen to partner with CA ERwin to help provide the deep insight and visualization capabilities needed to address these challenges.”

Casewise and CA Technologies will be demonstrating the solution at [Enterprise Data World 2013](#) (booth 501) April 29 - May 2 in San Diego. For more information on the combined solution, [click here](#) to register for a webinar taking place on May 21, hosted by Casewise and CA Technologies.

About Casewise

Established in 1989, Casewise provides Business Process Analysis, Business Process Management, Business Architecture and Application Portfolio Management software and consulting solutions to over 3,000 major global organizations. These solutions enable organizations to visualize, audit, report, improve and continually maximize complex operating processes and technology infrastructures.
