

At EDW 2013, Cambridge Semantics will feature the use of the Anzo semantic software suite for Smart Enterprise Data Management and for building Unified Information Access solutions.

Smart Enterprise Data Management solutions give IT far more flexibility and capabilities to govern all aspects of the data management lifecycle, from data acquisition to data distribution. Recent Anzo solutions that we'll talk about at EDW include **SOA governance, entity management, information landscape, and data on-boarding.**

Unified Information Access (UIA) solutions give business departments extensive self-service capabilities for tailored business solutions that draw on any structured or unstructured information either inside or outside of an organization. At EDW we'll talk about recent Anzo UIA solutions such as **insider trading surveillance, research management, and pharma competitive intelligence.**

Come see Cambridge Semantics' team members at these EDW sessions:

Ben Szekely

Tuesday @ 7:30 AM - Ben Szekely Founding Engineer

Data Integration on Steroids:

Demos of Unified Information Access as a new Enterprise Data Management Paradigm

Sean Martin

Tuesday @ 3:20 PM - Sean Martin CTO

Panel: Integrating Semantic Technology with Enterprise Information Management

Marty Loughlin

Wednesday @ 9:30 AM - Marty Loughlin, VP Financial Services

MDM and SOA are Broken:

How can Semantics Help Fix These Foundations of Enterprise Data Management?
