

ER/Studio® XE is a powerful modeling and architecture solution that combines business, data and application modeling into a multi-level design environment. Best of breed data, process and software modeling interfaces allow information and data architects to easily understand, design and communicate software, data and cross platform architectures across the organization for improved alignment between business and IT.

With a server-side repository and strong reporting capabilities, ER/Studio XE is designed for architects to work seamlessly across project teams to easily capture, consolidate and communicate IT artifacts.

An Enterprise Information Map serves as the metadata foundation to enable collaboration, comprehension & synchronization. ER/Studio Data Architect enables companies to discover, document and re-use data assets. With round-trip database support, data architects have the power to easily reverse-engineer, analyze and optimize existing databases.

ER/Studio Portal, a key component of ER/Studio, is the most collaborative way to report, search and browse your repository supporting Visual Data Lineage, commenting on reports and cross-team reporting. Users map governance policies to tables, processes and applications enabling collaboration with business decision makers.

ER/Studio Data Lineage, an invaluable add-on helps data management professionals graphically explore data lineage and offer insights into the extracts, transformations and loads of complex enterprise data.
