

At the event, Intellicus Technologies will showcase its advances in the domain of biG Analytics like OLAP on Hadoop and predictive analytics based on data sciences, which is an integral part of our latest release. Intellicus is the first tool in the industry that introduces a classic state-of-the-art merger of traditional reporting data sources like SQL & OLAP with emerging data storage and processing tools like Hadoop, Columnar DB & MPPs to offer the most intuitive self-service analytics tool.

We are a leading provider of next generation web-based business intelligence and reporting solutions. Incorporated in 2001, we now operate globally with over 9500+ installations across America, Europe and Asia. Fortune 500® companies choose Intellicus because of its ease of installation and use, and low maintenance costs. Leading ISVs appreciate our flexible architecture and solid integration framework.

Intellicus' flexible architecture supports multiple deployment options. Starting from a pure enterprise level deployment, it can be embedded in a OEMs own offering, can be offered as a Service over a hosted platform and can also be offered as a part of a larger project. Depending upon the nature of your requirement, Intellicus can be deployed accordingly.
