

**TRILLIUM  
SOFTWARE**

Trillium Software<sup>®</sup> delivered the latest version of Trillium Software System<sup>®</sup>. This newly-released data quality solution provides business leaders with improved access to critical data required for risk, compliance and business applications. Designed to identify and understand unstructured and structured information for a variety of industry-centric business processes, Trillium delivers real business benefits for a broad range of critical processes including claims management as well as FATCA, Basel II and CCAR compliance. New data visualization capabilities enable business executives and managers to visually understand the impact of data quality on their business processes through reporting and business intelligence. Complete business rule integration between profiling and cleansing, and more detailed rule prioritization and search, enable business leaders to clearly define and customize rules for compliance with specific regulations or processes. Expanded global data support, security, and usability enhancements provide the business with the flexibility to access a variety of data types – from globally-distributed sources – and process both unstructured and structured data points from documents such as insurance claims adjuster notes. Data quality problems represent real business concerns and line-of-business managers, along with their IT counterparts, are stepping up to better understand how poor data quality manifests itself within industry-specific business processes.
